Bengaluru, India | jan2309jr@gmail.com | +91 82960 52779 | www.linkedin.com/in/janani2309

PROFESSIONAL SUMMARY

Computer Science undergrad with internship experience building and deploying ML/DL models. Skilled in developing data-driven applications using Python, TensorFlow, and Streamlit, with strong foundations in DSA and Java.

EDUCATION

Bachelor of Technology in Computer Science and Engineering | CGPA - 8.48 (Pursuing)

Presidency University, Bengaluru, India

Senior Secondary (XII) | Presidency School Bengaluru East

Secondary (X) | Presidency School Bengaluru East

WORK EXPERIENCE

1. **Machine Learning Project Intern** - Labmentix | July 2025 - Present

- Developed and deployed multiple high-accuracy machine learning projects on Streamlit for real-time use.
- Utilized a wide range of ML/DL techniques, including ensemble methods, while consistently delivering new, well documented projects on a weekly basis.

2. **Project Intern** - Edunet Foundation (in collaboration with Shell) | June 2025 to July 2025

- Interned at Edunet Foundation, where I built a Greenhouse Gas Emission Prediction model using U.S. supply chain datasets. Implemented Linear Regression and Random Forest ($R^2 \sim 0.99$) with hyperparameter tuning, deployed via Streamlit, and gained exposure to green skills for developing sustainable, environmentally friendly AI solutions.

3. **Data Analytics Intern** - Deloitte Australia (Forage Simulation) | July 2025

- Performed forensic data analysis on large datasets to identify anomalies.
- Created interactive dashboards in Tableau to present KPIs.
- Used Excel for data classification, improving accuracy of business insights.

PROJECTS

1. **Brain Tumor Image Classifier** ([click here to view the web application](#))

- Built and deployed a **brain tumor classification web app** using InceptionV3 (transfer learning) with **87.4% accuracy**, classifying MRI scans into Glioma, Meningioma, Pituitary, or No Tumor.
- Integrated **Streamlit interface** for real-time predictions with confidence scores and visualization, enabling AI-assisted medical diagnosis.

2. **Local Food Waste Management System** ([click here to see the web application](#))

- Built a Streamlit app with **Python + SQL** enabling providers to list surplus food and receivers (NGOs/individuals) to claim it, with CRUD operations and real-time interaction.
- Performed **EDA & SQL-driven analytics** to uncover wastage patterns, improving food redistribution efficiency and supporting social good initiatives.

TECHNICAL SKILLS

- Programming:** Python, Java, C
- Web Development:** Django, Flask, HTML, CSS, JavaScript
- APIs:** REST API development & integration
- Database:** MySQL, MongoDB, Excel, Tableau, Power BI
- Machine Learning:** scikit-learn, TensorFlow, Keras, pandas, NumPy, matplotlib, seaborn, model evaluation & tuning
- Tools:** Git, GitHub, Streamlit, Vercel, VS Code
- Other:** DSA, ML workflow (EDA, preprocessing, modeling, deployment)

CERTIFICATIONS

- Machine Learning Specialization** (July 2025)
By DeepLearning.AI and Stanford Online in Coursera
- Oracle Cloud Infrastructure Data Science Professional** (October 2025)
By Oracle Learning Platform
